Suggest to change this banner and animation to something related to coding where the copy "Brighten your future with Codify College" to how it animated when people code.

Will also recommend to adapt the whole page creatives to techy and coding related if you guys agree with that.

Example as follow

" Your future is created by what you do TODAY not tomorrow"

— Robert Kiyosaki

TURE
EGE

Change your life with Coding

We help you with career transition or add a tech stak to your existing skill

---

There are few options of creatives we can do for the limited time offer. Propose a few here.

As spoken, we can do a A/B testing of the limited time offer on cold audience and retargeting to revisits. Then, we can decide from the traffic and bounce rate of the limited time offer page.

LIFE'S GOLDEN TICKET
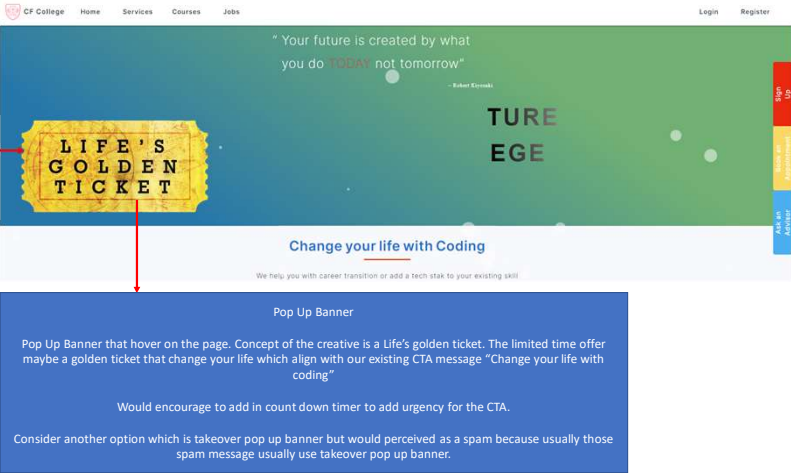

Pop Up Banner

Pop Up Banner that hover on the page. Concept of the creative is a Life's golden ticket. The limited time offer maybe a golden ticket that change your life which align with our existing CTA message "Change your life with coding"

Would encourage to add in count down timer to add urgency for the CTA.

Consider another option which is takeover pop up banner but would perceived as a spam because usually those spam message usually use takeover pop up banner.

If I understood correctly, the existing curriculum is meant for the Full Stack Developer course.

I suggest to each course to have its curriculum when visitors click on the course. So it means when visitor click on the course, it wont drive them to another page. We combined the content of each course in the curriculum so visitor can have a glance of all the courses curriculum without transferring to another page.

Comprehensive Curriculum

Our Full Stack Developer Courses are made to give you and easy and rapid path in web development. You can build your own web application from scratch with the comprehensive curriculum provided.

Foundation 1 week	Basic Frontend 9 weeks	Advanced Frontend 9 weeks	Advanced Backend & Database 9 weeks	Projects 2 weeks
1	9	18	27	30

Internet theory
At begining you will learn Web Basics, How the Internet Works, HTTP Request and Response Cycle, Client and Server Architecture and Terminologies.

JavaScript
Create responsive web pages for modern browsers using HTML, CSS, and JavaScript. JavaScript, ECMAScript 6, DOM Manipulation, Regular Expressions, Object Oriented Programming, Data Structures & Algorithms.

Advanced Style Technology
Build fast, responsive sites with Bootstrap4. Learn how to use Bootstrap, and build websites in couple of hours.Advanced Css3 using flexbox and Grid System technology, animation and transition, Sass extention, Sass module, and variables, write optimized and reusable style using Sass.

Building Modren Website
Build a richly interactive, a modern front end application using advanced Css3,Bootrsap4 and HTML5. Collaborate as a team using Git and GitHub, widely accepted collaboration practices, and Agile development workflows.

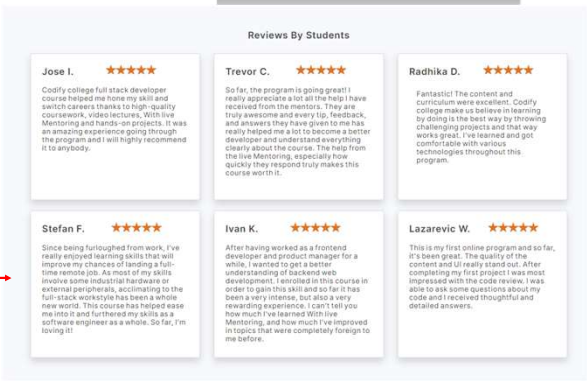

Regards to the form for visitors who do not know which course they should choose. I recommend to have a CTA message under the curriculum to get them to ask an advisor for now.

After we have a pool of data of knowing what are the frequent question asked then we create a template / implement a bot in future with these data. Then we can categorized the visitors as few profile : Newbie, Upgrader, Job seeker

{ Unsure which course fits you }
→ Talk to our advisor to craft the ideal course plan
⊙ Ask an advisor

To make testimonials believable, we can do the followings:

1) Have a picture of the students
2) We even can have some videos of the top students talking about their experience
3) As spoken, we can showcase their homeworks/projects that would add credibility and at the same time we can showcase these projects to the partners too
4) We can have some short video of the classes too

Subject to get consent from students.

Reviews By Students

Jose I. ★★★★★
Codify college full stack developer course helped me hone my skill and switch careers thanks to high-quality coursework, video lectures, With live Mentoring and hands-on projects. It was an amazing experience going through the program and I will highly recommend it to anybody.

Trevor C. ★★★★★
So far, the program is going great! I really appreciate a lot all the help I have received from the mentors. They are truly awesome and every tip, feedback, and answers they have given to me has really helped me a lot to become a better developer and understand everything clearly about the course. The help from the live Mentoring, especially how quickly they respond truly makes this course worth it.

Radhika D. ★★★★★
Fantastic! The content and curriculum were excellent. Codify college make us believe in learning by doing is the best way by throwing challenging projects and that way works great. I've learned and got comfortable with various technologies throughout this program.

Stefan F. ★★★★★
Since being furloughed from work, I've really enjoyed learning skills that will improve my chances of landing a full-time remote job. As most of my skills involve some industrial hardware or external peripherals, acclimating to the full-stack workstyle has been a whole new world. This course has helped ease me into it and furthered my skills as a software engineer as a whole. So far, I'm loving it!

Ivan K. ★★★★★
After having worked as a frontend developer and product manager for a while, I wanted to get a better understanding of backend web development. I enrolled in this course in order to gain this skill and so far it has been a very intense, but also a very rewarding experience. I can't tell you how much I've learned With live Mentoring, and how much I've improved in topics that were completely foreign to me before.

Lazarevic W. ★★★★★
This is my first online program and so far, it's been great. The quality of the content and UI really stand out. After completing my first project I was most impressed with the code review. I was able to ask some questions about my code and I received thoughtful and detailed answers.

TUTORING THAT GIVES BEST RESULT
